

# Inventory Mining™

**A data driven,  
monthly approach  
to inventory  
management.**

## Features/Benefits

- Proactive approach to inventory management
- Target high priority inventory items
- Boost cash flow
- Reduce expired goods
- Eliminate stagnant inventory
- Monitor inventory turnover ratio
- Monitor inventory fluctuations monthly
- Increase effectiveness of cycle counts
- Monitor performance of individual stores for multiple store owners
- Identify returnable products with no usage
- Identify valuable store to store transfers
- Coach inventory manager for continued success
- Promote effective med-sync practices
- Identify items for scheduled purchasing
- Monitor and report expired goods
- Keeps consistent focus on managing inventory
- Provide insight into inventory efficiency over time

## Process

- Pull reports from customer Pharmacy management system
- Analyze reports for opportunities
- Summarize findings in our own report to pharmacy owner/manager
- Guide inventory manager through opportunities found during analysis
- One on one consulting with inventory manager each month to work opportunities identified during analysis for maximum benefit to the pharmacy

During this process, customers receive top tier analysis of their inventory performance and purpose built solutions to maximize efficiency over time. In one hour per month, you can reduce total inventory, slash expired goods totals, maximize inventory turns, and start to eliminate stagnant inventory from your shelves.

We're taking what we've learned from 9 years of managing inventory on site with over 300 independent pharmacies across the nation and bringing our experts to you for one hour per month to focus on increasing the inventory performance of your store. For the first time ever, you can work, one on one, with one of our inventory analysts to improve your approach to inventory management for pennies on the dollar.
